## Preface

It gives me a great pleasure to present the 2020 gross domestic product (GDP) annual estimates. The Central Statistical Office (CSO) publishes the country's gross domestic product (GDP) on quarterly and annual basis. GDP measures the monetary value of all final goods and services produced within the country's borders in a given time period. It measures the size of the economy and its growth rate over time, and is the most familiar and widely recognised feature of the national accounts.

These estimates were compiled following the System of National Accounts (SNA 2008) which is described as a statistical framework that provides comprehensive, consistent and flexible set of macroeconomic accounts for policymaking, analysis and research purposes. The classification of individual economic activities is based on the International Standard of Industrial Classification (ISIC Rev. 4)

Moreover, these estimates were compiled using the Production approach which is a sum of gross value add (GVA) from the production of goods and services at market prices and the Expenditure approach which is a summation of the total expenditure of different sectors of the economy.

I would like to give sincere thanks to our different data sources for their continual provision of the required data. Without them, it would have been impossible to produce these estimates.

#### A.M. Zwane Director of Statistics

## Background

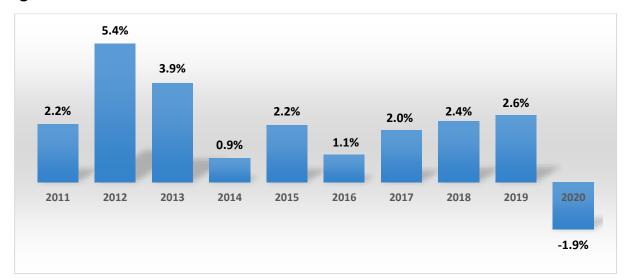

GDP is a measure of the economic activity and corresponds to the value of all goods and services produced less the value of any goods or services used in their production within a country. Nominal GDP is the market value of goods and services at current prices, whilst real GDP estimates are adjusted for inflation to give constant prices relative to a base year. The base year is chosen to give an accurate reflection of the economy at a given time. In the case of Eswatini the base year is 2011. The real GDP growth rate is the level at which real GDP changes from one year to the next. This allows for comparisons of an individual economy over time and between economies of different countries in a given year.

Estimates of Gross Domestic Product (GDP) by both Production and Expenditure approaches were compiled according to the concepts and definitions of the System of National Accounts (2008 SNA), which is the internationally agreed standard set of recommendations on how to compile measures of economic activity. Amongst others, the International Standard Industrial Classification (ISIC) Revision 4 was also used to classify the establishments by kind of economic activity.

## **Key Findings**

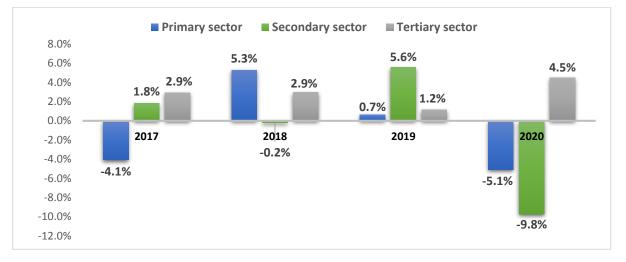

The Gross Domestic Product (GDP) for the year 2020 stands at **E65.432 billion**. The Real GDP has declined by **-1.9 percent** compared to a revised growth of 2.6 percent realised in 2019 (Figure 1). The observed decline is mainly contributed by the Secondary Sector which declined by -9.8 percent and the Primary Sector by -5.1 percent (Figure 2).

4

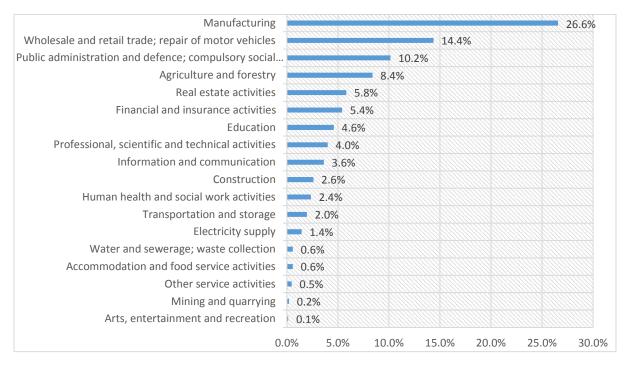

## **Industry Contributions**

Figure 3 below illustrates the proportion of GDP by industry for 2020. Manufacturing contributes the largest share to GDP of 26.6%, followed by Wholesale and retail trade with 14.4%, and Public administration and defence with 10.2%. The least contributing industries are Mining and Quarrying, Arts entertainment and recreation with 0.2% and 0.1% respectively.

### Figure 3: Industry Contributions to GDP

## **Revisions of Preliminary 2019**

Accurate and consistent data is needed for policy formulation and decision making. Due to these inherent data needs, provisional data may be used pending availability of firm data. In this regard, revision of data becomes inevitable. However, the revision should be done systematically and in a transparent manner.

National accounts are revised due to revisions to source data, availability of new data and introduction of new methodology. The main objectives of these revisions is to ensure transparency in the revised data and to maintain the quality and integrity of the data.

Description	Preliminary	Revised	Differences
	2019	2019	
Primary sector	-0.8%	0.7%	1.5%
Secondary sector	4.4%	5.6%	1.1%
Tertiary sector	1.4%	1.2%	-0.2%
GDP by economic activity	2.2%	2.6%	0.4%

The 2019 preliminary GDP estimates has been revised upwards by 0.4%. The main contributors of these revisions were both the primary sector and the secondary sector which were revised up by 1.5% and 1.1% respectively. These revisions were due to changes observed in source data.
